robertdkirkby.com

Victoria University of Wellington

- We have covered Life-Cycle Models and OLG Models.
- Brief summary...

- Part 1: Setup and solve a basic life-cycle model:
- Steps involved
- Decision variables (d), Endogenous states (a), and Markov exogenous states (z).
- Divide-and-Conquer to reduce runtimes and reduce memory use (requires conditional monotonicity).

- Part 2: Setup and solve a life-cycle model:
- i.i.d exogenous states (e).
- Semi-exogenous states (*semiz*).
- Permanent types (N_i and $Names_i$)

- Part 3A: Other preferences:
- Epstein-Zin preferences.
- Quasi-Hyperbolic discounting: Impatience.
- Gul-Pesendorfer preferences: Temptation and Self-Control.
- Loss Aversion.
- Ambiguity Aversion.

- Part 3B: Other Endogenous States:
- Two endogenous states.
- experienceasset: $aprime(d, a)$
- experienceassetu: $aprime(d, a, u)$
- riskyasset: $aprime(d, u)$

- Part 3C: Calibration and GMM Estimation:
- Calibrate Life-Cycle Model.
- GMM Estimate Life-Cycle Model.

- Part 4: OLG Models
- Stationary General Eqm.
- Permanent types.
- Works with everything we saw for Life-Cycle Models.

- Part 5: OLG Transition Path
- General Eqm Transition Paths.
- Preannouncement, Multiple reveals, 'tminus1'.
- Permanent Types.
- Works with 'standard' Life-Cycle Models.

- We did not cover infinite horizon models.
- Can do stationary general eqm.
- Can do transition paths.
- Works with 'standard' models (d , a , z , permanent types).
- Can do firm entry/exit models.

- VFI Toolkit contains copies of `getFREDData()` and `getIMFData()`.
These can be used/downloaded without toolkit, but are also included in it.
- Commands to import data from FRED and IMF into Matlab.
- Makes it very easy to, e.g., import US GDP data and analyse it, and then update every year just changing end date and rerunning script.

- **Intro to Life-Cycle Models:** pdf of 50 example Life-Cycle models, adding features one at a time. Covers everything we did here, plus much more.
- **Intro to OLG Models:** pdf of example OLG models. Adding features one at a time.

- Other useful resources:

- Life-Cycle OLG Reading List

Codes implementing models from various papers (not formally part of VFI Toolkit).

- Replications

Codes implementing replications of various papers (these are not updated/maintained, so if they error, ask me on forum and I will update). Replications do everything in the paper.

Life-Cycle Model

- Any questions, feature requests, etc.
- Forum: discourse.vfitoolkit.com

- To use VFI Toolkit you need Matlab + Nvidia GPU.
- There are no other requirements of use.
VFI Toolkit has GPL3 license. There are requirements if you modify the toolkit itself.
- I will be grateful if you cite VFI Toolkit when using it:
Robert Kirkby. VFI Toolkit, v2. Zenodo, 2022. doi:
<https://doi.org/10.5281/zenodo.8136790>

- Thanks for coming!
- I hope you find VFI Toolkit useful.
